

Standard Operating Procedure (SOP) for DBMS Mini Project Evaluation

1. Purpose

This SOP defines the evaluation process and criteria for assessing DBMS Mini Projects to ensure consistency, transparency, and fairness in grading.

2. Scope

This applies to all students enrolled in the DBMS course undertaking the mini project as part of their curriculum.

3. Evaluation Components & Marks Distribution (Total: 30 Marks)

3.1 Problem Relevance, Background & Context (6 Marks)

- Evaluate clarity and relevance of the problem statement to DBMS.
- Check for proper background, motivation, scope, and data description.
- Assess justification for choosing a database solution.

Marking Guidelines:

- 6: Highly relevant, well-justified, complete context
- 4–5: Relevant with minor gaps
- 2–3: Basic but lacks clarity/depth
- 0–1: Weak or unclear problem definition

3.2 Database Design & Modeling (8 Marks)

- Assess ER Diagram (entities, attributes, relationships).
- Verify schema design, constraints, and keys.
- Check normalization (preferably up to 3NF/BCNF).

Marking Guidelines:

- 8: Accurate design, well-normalized, logically sound
- 6–7: Minor issues in design/normalization
- 3–5: Basic design with noticeable errors
- 0–2: Incomplete/incorrect design

3.3 Implementation: SQL Queries, Transactions & Execution (8 Marks)

- Evaluate use of SQL: DDL, DML, joins, views, triggers, transactions.

- Verify correctness of outputs and execution.

Marking Guidelines:

- 8: Complete and correct implementation
- 6–7: Mostly correct with minor errors
- 3–5: Basic queries, missing key components
- 0–2: Major errors/incomplete implementation

3.4 Insight, Analysis & Originality (4 Marks)

- Assess analytical thinking and interpretation of results.
- Check for innovation, performance evaluation, or unique approach.

Marking Guidelines:

- 4: Strong insights and originality
- 3: Good analysis with minor gaps
- 2: Basic analysis, limited creativity
- 0–1: Minimal or no insight

3.5 Project Demonstration & Viva Voce (3 Marks)

- Evaluate clarity of presentation and demonstration.
- Assess understanding through Q&A.

Marking Guidelines:

- 3: Clear, confident, answers all questions
- 2: Good presentation with minor gaps
- 1: Basic explanation, lacks clarity
- 0: Unable to explain project

3.6 Project Report (1 Mark)

- Verify adherence to the given template.
- Check completeness and timely submission.

Marking Guidelines:

- 1: Complete, well-structured, on time
- 0.5: Minor omissions
- 0–0.5: Incomplete/delayed
- 0: Poor or not submitted

4. Evaluation Procedure

1. **Review Project Report** before the presentation.
2. **Assess Database Design** (ERD, schema, normalization).
3. **Verify Implementation** by checking SQL queries and outputs.
4. **Observe Demonstration & Conduct Viva.**
5. **Assign Marks** for each criterion based on rubric.
6. **Record and Consolidate Scores** out of 30.

5. Submission Guidelines

- Students must submit:
 - Project Report (as per template)
 - SQL scripts and outputs
 - PPT presentation
- Submission must be done through the designated platform (e.g., GCR).

6. General Instructions

- Ensure academic integrity and originality.
- Late submissions may be penalized as per policy.
- All students must adhere to the presentation schedule.

7. Outcome

The evaluation will reflect:

- Conceptual understanding of DBMS
- Practical implementation skills
- Analytical and problem-solving ability
